Company
Vechain is a global organization working to enable mass blockchain adoption. Our Web3 ecosystems, deep cross-sector expertise and research-backed innovation are jumpstarting scalable sustainability solutions. The foundation of the vechain ecosystems is our layer-1 blockchain VechainThor. One of the world's most energy-efficient blockchain platforms, this transparent, trustworthy, decentralized structure is vechain's bottom line in the creation of innovative, new business models to deploy across industries. To date, we have already connected over 300 enterprise partners with real-world solutions. Bolstering trust, collective sustainability action, redefined value and interconnected ecosystems is the vechain prerogative.

Our Culture
We're a hard-working, innovative, and passionate group intensely focused on building great Web3 products and Sustainability solutions. Look closely and you'll see some common traits we look for in all our hires. We take extreme ownership, embrace feedback, and are high-performing individuals that work great in team environments. We're mission-focused, yet comfortable in dealing with change and ambiguity, and we're not afraid to change direction when we need to. Above all, we're optimists and want people to join us who thrive in fast-paced, high-quality, and disruptive environments.

The role
Reporting to our Head of Product Delivery, we are seeking an experienced Product Owner for a newly formed role in our Tech team. You'll play a key role in the development of breakthrough products and contributing towards developing the Vechain ecosystem and the future of Web3.

What you'll do
Individuals in this role would be responsible for a variety of activities including:

- Contribute to the product vision by creating and maintaining high quality user stories to grow the product backlog for your product teams.
- Collaborate with multiple product stakeholders, clients, developers, designers and testers, to craft product requirements as engineering tasks aligned with the product vision and roadmap.
- Partner with your product teams to ensure your services are highly reliable, scalable and secure.
- Develop a deep understanding of existing implementations of your products and partner with your product team to develop a roadmap.
- Work closely with the Head of Product to provide product updates.

What you'll bring
Required:
- 5+ years of experience as a Product Owner / Business Analyst in a technology environment using Agile development frameworks.
- Strong analytical and problem solving skills, including a thorough understanding of how to interpret customer business needs and translate them into application and operational requirements.
- Excellent written and verbal skills and the ability to interact professionally with a diverse group including executives, managers, developers and subject matter experts.
- Successful practice of agile methodologies at enterprise scale with distributed teams.
- Excellent organization, multi-tasking, decision making and relationship building skills.
- Strong understanding of how software is built, deployed and tested.
- An interest and understanding of blockchain and cryptocurrencies.
- Experience of using blockchain protocols and Web3 applications.
- Ability to speak and write English fluently.
- Ability to work independently as well as part of a team.
- Bachelor's degree – preferably in Business, Computer Science or Engineering.
